VERTICAL AXIAL-FLOW PUMPS

Model VS Bore 350~1000mm (14~40in)

EBARA VERTICAL AXIAL-FLOW PUMPS

Features

- Higher operating efficiency over a wide range of capacities reduce operation cost.
- Simple construction permits easy maintenance.
- Smaller installation space than that of horizontal pumps.
- Guaranteed high performance, quality and prompt delivery.

Specifications

Bore	350~1000mm (14~40in)
Capacity	Approx. 12~150m ³ /min (3200~4000USGPM)
Total head	Approx. 1.6~6m (5.3~20ft)
Liquid	Fresh water, River water, Sewage, Sea water, etc. Temperature 0~45°C (32~110°F)
Construction	
Radial bearing	Submerged bearing
Thrust bearing	Ball bearing
Shaft seal	Gland packing
Accessories	Pump base, shaft coupling, drain piping, anchor bolts

Materials

(Typical material combinations)

	Fresh water	River water	Sewage	Sea water
Casing	Cast Iron/ Rolled Steel	Cast Iron/ Rolled Steel	Cast Iron/ Rolled Steel	Low Alloy C.I. /Ni-resist D2 /316S.S.
Impeller	Bronze	Bronze/ 304S.S.	Bronze/ 304S.S.	316S.S.
Shaft	Carbon Steel	Carbon Steel	420S.S.	316S.S.
Shaft sleeve	304S.S.	304S.S.	304S.S.	316S.S.
Shaft-enclosing tube	Carbon Steel	Carbon Steel	304S.S.	316L S.S.
Pump base	Cast Iron			
Driver pedestal	Rolled Steel			

- Other materials such as Nickel aluminium bronze, Duplex stainless steel, Monel, Alloy 20, etc. can also be applied.
- Selection of material requires careful study of the properties of the liquid handled and of the operating conditions, etc.
For specific details, please consult our factory.

Applications

River water drainage,
Irrigation and drainage for agricultural use,
Water intake/transfer for general industrial use

Open line shaft

Enclosed line shaft
